Description

LED plant growth lamp is a specialized light fixture designed with specific spectral wavelengths, which uses the light emitted by LED light-emitting elements to replace sunlight, specifically promoting plant photosynthesis and creating a suitable light environment for plant growth and development.

Key Features

- > Enhance color and freshness, prevent excessive growth.
- > Promote growth and increase yield.
- > Easy and secure installation.
- > Scientific light distribution, energy-saving and power-saving

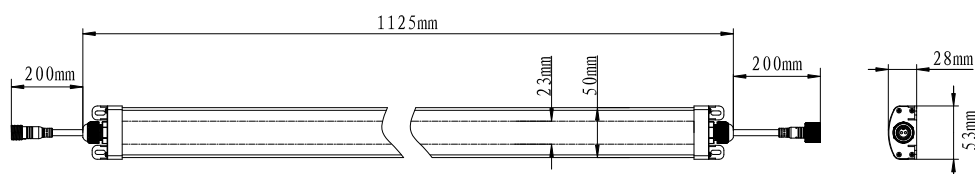

- The rate of photosynthesis and transpiration are directly affected by temperature, humidity and air flow;
- The perfect temperature and humidity for your plants are found between 75-85 °F and 50%-70% humidity;
- With plenty of airflow to replenish CO₂;
- The suitable PH is 6-6.5;
- You may add more calcium and magnesium than normally needed.
